1. Application

The display is a TFT active matrix electrophoretic display, with associated interface and control logic, and a reference system design.

The 5”active area contains 800×600 pixels, the display is capable to display images at 2-16 gray levels (1-4 bits) depending on the display controller and the associated waveform file used .(Note 1-1)

Note 1-1
The standard waveform provided by EIH are 4bits waveform for ISIS and broadsheet, 3 bits waveform for broadsheet & 8track,2 bits waveform for PVI-6001A.

2. Features

- High contrast TFT electrophoretic
- 800x600 display
- High reflectance
- Ultra wide viewing angle
- Ultra low power consumption
- Pure reflective mode
- Bi-stable
- Commercial temperature range
- Landscape, portrait mode
- Antiglare hard-coated front-surface

6.Electrical Characteristics

6-1) Panel interface description

This panel is driven by Boardsheet display controller ASIC. See control product specification for details.

6-2) Absolute maximum rating

Parameter	Symbol	Rating	Unit
Logic Supply Voltage	VDD	-0.3 to +7	V
Positive Supply Voltage	V_{POS}	-0.3 to +18	V
Negative Supply Voltage	V_{NEG}	+0.3 to -18	V

- The Typical power consumption is measured using 85Hz WF with following pattern transition: from horizontal 4 gray scale pattern to vertical 4 gray scale pattern.(Note 6-1)
- The standby power is the consumed power when the panel controller is in standby mode.
- The listed electrical/optical characteristics are only guaranteed under the controller & waveform provided by EIH.
- Vcom is recommended to be set in the range of assigned value ± 0.1V
- The maximum I_{COM} inrush current is about 800 mA

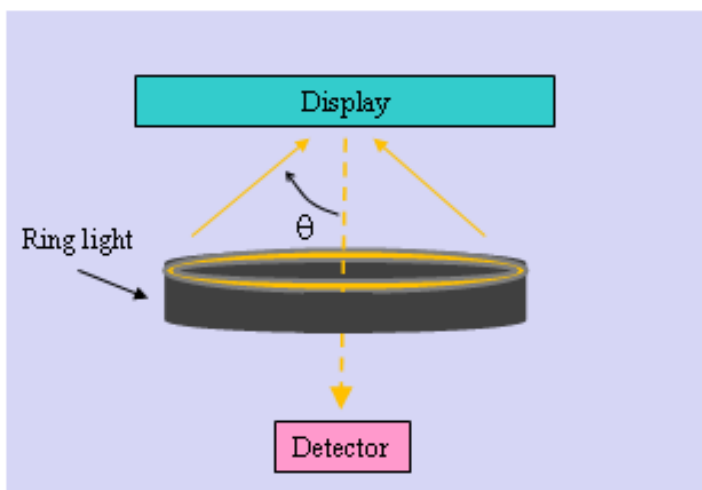
9-2)Definition of contrast ratio

The contrast ratio (CR) is the ratio between the reflectance in a fu ll white area (Rl) and the reflectance in a dark area (Rd):

CR = Rl/Rd



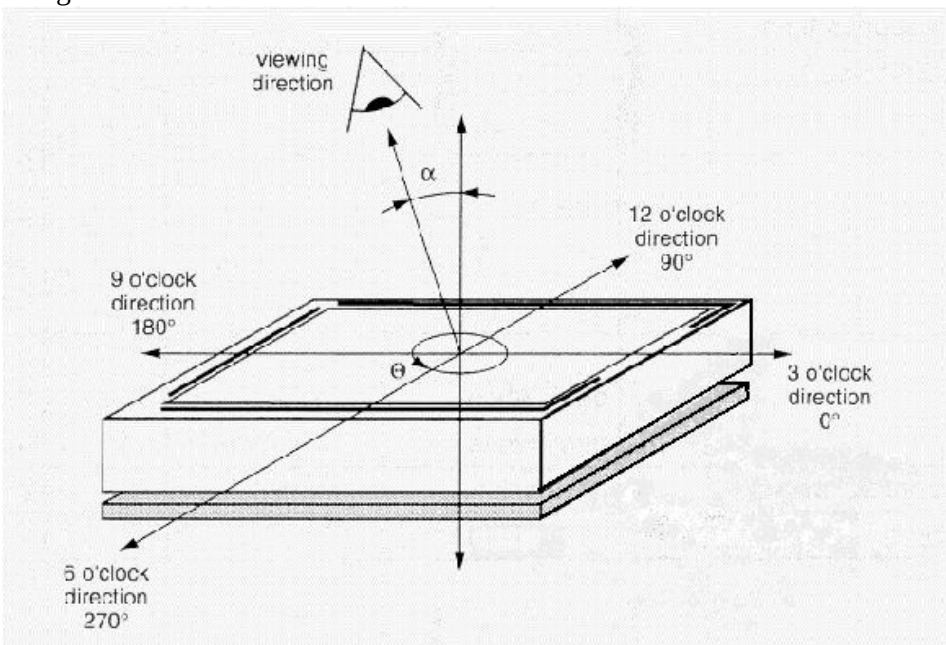
The information contained herein is the exclusive property of E Ink Holdings Inc. and shall not be distributed, reproduced, or disclosed in whole or in part without prior written permission of E Ink Holdings In c.

9-3)Reflection Ratio

The reflection ratio is expressed as:

R = Reflectance Factor$_{\text{white board}}$ x (L_{center} / $L_{\text{white board}}$)

L_{center} is the luminance measured at center in a white area (R=G=B=1). $L_{\text{white board}}$ is the luminance of a standard white board. Both are measured with equivalent illumination source. The viewing angle shall be no more than 2 degrees.



α = declination / θ = azimuth

10.HANDLING, SAFETY AND ENVIROMENTAL REQUIREMENTS

WARNING
The display glass may break when it is dropped or bumped on a hard surface. Handle with care. Should the display break, do not touch the electrophoretic material. In case of contact with el ectrophoretic material, wash with water and soap.

CAUTION
The display module should not be exposed to harmful gases, such as acid and alkali gases, which corrode electronic components.
Disassembling the display module can cause permanent damage and inval idate the warranty agreements.

Observe general precautions that are common to handling delicate electronic components. The glass can break and front surfaces can easily be damaged. Moreover the display is sensitive to static electricity and other rough environmental conditions.

Data sheet status	
Product specification	This data sheet contains final product specifications.
Limiting values	
Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.	
Application information	
Where application information is given, it is advisory and does not form part of the specification.

Note : The protective film must be removed before temperature test.

< Criteria >

a. Module should normally work under the normally condition

b. After reliability test, there is no display NG inclu ding line and no image.

c. Stylus Tapping Pass criteria: no glass breakage or damage to microcapsules.
